

Stabilizing ERPNext and bringing more of Kyosk onto it

Post-launch bug mitigation, tax authority integrations in three countries and new department rollouts

3 countries Tax authority integrations managed across Kenya, Uganda and Tanzania	New teams Purchasing and HR brought onto ERPNext, including employee lifecycle management	At launch Joined during the ERPNext launch period and owned post-launch bug mitigation
--	---	--

Role	Product Manager, Internal Tools
Company	Kyosk, which helps informal retailers access credit to buy fast-moving consumer goods (FMCG)
Scope	ERPNext, the company's core ERP, as a core part of the internal tools portfolio
Skills used	Stakeholder management, systems rollout, cross-department change management, process documentation

The challenge

I joined Kyosk during the ERPNext launch period. ERPNext was the company's core ERP, so what went wrong after launch affected how the business ran day to day, and there were extensive post-launch bugs to deal with.

At the same time, ERPNext still had to reach beyond the teams that used it first, and it had to connect to tax authorities in three countries.

What I did

- Took responsibility for mitigating the extensive post-launch bugs, working with the people affected to bring the platform to a stable footing.
- Managed the integration stakeholders, including the tax authorities in Kenya, Uganda and Tanzania.
- Worked with departments such as purchasing and HR to bring them onto ERPNext, including end-to-end employee lifecycle management for HR.
- Alongside the internal tools work, contributed to initiatives that help informal retailers access credit to buy FMCG, owning delivery end to end and coordinating cross-functional teams.

The outcome

ERPNext moved beyond its launch period as the company's core ERP. Purchasing and HR were brought onto the platform, and the integrations with the tax authorities in Kenya, Uganda and Tanzania were managed through to delivery.

What I took from it

Joining at launch means inheriting the rough edges. The first job was earning trust by fixing what was broken, and only then asking other departments to move onto the system. Integrations with tax authorities are as much stakeholder work as technical work.
